

# Our environmental stewardship can help you transform your business

We put sustainability at the heart of everything we do - helping our customers run a better business, save money and reduce their carbon footprint

manufactured in the UK

1/3 Lower Carbon footprint

2/3 Less Energy

up to 10x More tear resistant

## Environmental stewardship is in our DNA

Not only are we one of Europe's leading manufacturers of refuse sacks, making over 30 million refuse sacks per week, we are also at the forefront of the circular economy as Europe's largest recycler of waste polythene.

We have created the UK's largest polythene recycling infrastructure across our four Environment Agency accredited UK sites, with the ability to reprocess in excess of 150,000 tonnes each year of post-use material from commercial, retail, industrial and agricultural markets.

This recycled polythene is used to produce products such as our award winning Green Sack™. The Green Sack™ range is made in the UK from 100% recycled British farm plastic that might otherwise be burnt or sent to landfill.

Made from super strength film and used bale wrap the Green Sack™ out performs other refuse sacks on the market, with up to ten times more tear resistance of other leading refuse sacks.

Berry bpi refuse sacks are accredited under the Cleaning and Hygiene Suppliers Association (CHSA) Refuse Sacks Standard. The CHSA is the industrial body representing the interests of distributors and the end user.
